SELL SHEET · 1 OF 3 · FOR CLUB OWNERS

BitPadel for club owners

Club software for padel and pickleball. You run it on your own computer. It is free and open source. This project does not charge a license fee and does not list a price.

Prototype: not yet tested with real money or real doors

Court booking

- Players pick a day on a calendar, then a time on a court grid.
- They hold the time and pay. The booking confirms when payment settles. Unpaid holds expire.
- The same time cannot be booked twice.
- Players can filter by court, length, or sport. The sport list appears when court names include a sport, such as padel or pickleball.

Members and guests

- Add a member, a membership type, and optional name, phone, email, and photo.
- A household links a primary member and dependents. Each person still needs their own card or wallet. A household does not send a bill.
- Guests stay off until you set a cap.
- A named guest acknowledges a waiver. The form stores the version and the time. Marketing contact is opt-in and kept apart from the visit.

Front desk and admin

- The desk shows who is on site. Checking someone out ends the visit. It does not lock a door.
- Staff roles are owner, manager, front desk, and coach.
- Admin is where you add courts, times, members, prices, and refunds.

Your club's look and language

- Set the club name, logo, colors, font, and footer. Until you do, pages say "Your club."
- BitPadel is the name of this software. Give your club its own name.
- Pages can use English, Spanish, French, Italian, or Brazilian Portuguese. You set the club default. A language menu is on the member pages.
- Spanish, French, Italian, and Brazilian Portuguese are machine drafts. A native speaker still needs to review them.

Reports and Playtomic

- Download a sales file for a date range. End-of-day totals cover Lightning, Stripe, Square, and refunds.
- That total is for your books. It is not a tax filing.
- Playtomic sync is optional and read-only. It can import bookings and payment records. An imported time blocks a new hold on that court.
- BitPadel does not write bookings back to Playtomic. Sync runs on a timer, or when you press Sync now.

You host it

- Your data stays on your machine. The code is free under AGPL-3.0.
- If you change the software and run it for members, you share those changes with them.
- The kit includes staff manuals, a pilot checklist, install notes, a Docker setup, and a blank financial model. You fill in your own numbers.
- You can back up the database. Encryption is optional.

Planned, not available yet

These items are on the roadmap and are not in the software today: tournaments and socials; open play and leagues; coach lessons; paddle, ball, and ball-machine rentals; a player CRM with leads and tags; online waiver signatures; an installable phone page; lockers; a vending-machine controller; lights and gear that follow a booking; a guest pass a member can sign. A workshop slide deck, a spreadsheet model with charts, and case studies are also still ahead.

Before you rely on it

- Card and Lightning payments start in test mode. The payments sheet says how.
- Translations other than English are machine drafts pending native review.
- Waiver and privacy wording needs a local legal review.
- The door software does not control exits, fire egress, or other life-safety systems.
